CONTENTS OF VOLUME 188

NUMBER 1, JULY 1990

The Use of a Multichannel Scaling Method to Detect Radioactive Species in Spread Monolayers <i>Francis H. C. Tsao, Thomas K. F. Foo, Paul M. DeLuca, Jr., and George Zografi</i>	1
Immunochemical Detection of Glycosphingolipids on Thin-Layer Chromatograms <i>Bernhard Kniep and Peter F. Mührladt</i>	5
pH and Buffering in the Bicinchoninic Acid (4,4'-Dicarboxy-2,2'-biquinoline) Protein Assay <i>Jun-Xian Zhang and Peter J. Halling</i>	9
Preparation of ³⁵ S-Labeled Polyphosphorothioate Oligodeoxyribonucleotides by Use of Hydrogen Phosphate Chemistry <i>Cy A. Stein, Patrick L. Iversen, C. Subasinghe, Jack S. Cohen, Wojciech J. Stec, and Gerald Zon</i>	11
Analysis of β -Hydroxy- β -methyl Butyrate in Plasma by Gas Chromatography and Mass Spectrometry <i>Steven Nissen, Michael Van Koeveering, and Debra Webb</i>	17
High-Pressure Liquid Chromatography of Sialic Acids on a Pellicular Resin Anion-Exchange Column with Pulsed Amperometric Detection: A Comparison with Six Other Systems <i>Adriana E. Manzi, Sandra Diaz, and Ajit Varki</i>	20
Separation of the DNA Molecules beyond Conventional Size Limits by Gel Electrophoresis with Sodium Dodecyl Sulfate <i>Sinan Taş</i>	33
Preparation and Purification of Soybean Lipoyxygenase-Derived Unsaturated Hydroperoxy and Hydroxy Fatty Acids and Determination of Molar Absorptivities of Hydroxy Fatty Acids <i>G. Graff, L. A. Anderson, and L. W. Jaques</i>	38
Gangliosides Noncovalently Bound to DEAE-Sephadex: Application to Purification of Anti-ganglioside Antibodies <i>Pablo E. A. Rodriguez and Federico A. Cumar</i>	48
A Kinetic Method for Determination of Free Vanadium(IV) and (V) at Trace Level Concentrations <i>D. C. Crans, M. Shaia Gottlieb, J. Tawara, R. L. Bunch, and L. A. Theisen</i>	53
Method for Rapid Separation of Liposome-Associated Doxorubicin from Free Doxorubicin in Plasma <i>Robert L. Thies, D. Wayne Cowens, Pieter R. Cullis, Marcel B. Bally, and Lawrence D. Mayer</i>	65
Optimization of Immobilized Enzyme Hydrolysis Combined with High-Performance Liquid Chromatography/Thermospray Mass Spectrometry for the Determination of Neuropeptides <i>Robert D. Voyksner, David C. Chen, and Harold E. Swaisgood</i>	72
A Solid Phase Assay for the Protease of Human Immunodeficiency Virus <i>Ewald M. Wondrak, Terry D. Copeland, John M. Louis, and Stephen Oroszlan</i>	82
Enzymatic Synthesis of the cAMP Antagonist (Rp)-Adenosine 3',5'-Monophosphorothioate on a Preparative Scale <i>Michiel M. Van Lookeren Campagne, Fernando Villalba Díaz, Kevin W. Chason, and Richard H. Kessin</i>	86
Estimation of Cellular DNA Content in Cell Lysates Suitable for RNA Isolation <i>Zbigniew Rymaszewski, William A. Abplanalp, Robert M. Cohen, and Piotr Chomczynski</i>	91
Nonradioactive Ligand Binding Assay for Epidermal Growth Factor Receptor <i>Ivan C. King and Joseph J. Catino</i>	97
Electrophoretic Detection of Ascorbate Oxidase Activity by Photoreduction of Nitroblue Tetrazolium <i>Mauro Maccarrone, Antonello Rossi, Gabriele D'Andrea, Gianfranco Amicosante, and Luciana Avigliano</i>	101
A Radioisotopic Assay for Polyamine Oxidase <i>Takeshi Kumazawa, Hiroshi Seno, and Osamu Suzuki</i>	105
2,4-Dinitrophenyl [¹⁴ C]Cysteinyl Disulfide Allows Selective Radioactive Labeling of Protein Thiols under Spectrophotometric Control <i>Gerard Drewes and Heinz Faulstich</i>	109
Application of Sodium Dodecyl Sulfate-Gel Electrophoresis to Low Molecular Weight Polypeptides <i>Jianmin Huang and Harry R. Matthews</i>	114

High-Performance Liquid Chromatographic Analysis of Radiolabeled Inositol Phosphates	118
<i>Gregory S. Taylor, Joe G. N. Garcia, Randall Dukes, and Denis English</i>	
Interaction of Ruthenium Red with Ca^{2+} -Binding Proteins	123
<i>Jeffrey H. M. Charuk, Charles A. Pirraglia, and Reinhart A. F. Reithmeier</i>	
Difference between Histidine and Histamine in the Mechanistic Pathway of the Fluorescence Reaction with <i>ortho</i> -Phthalaldehyde	132
<i>Teruki Yoshimura, Tetsuya Kamataki, and Toshiaki Miura</i>	
Preparative High-Performance Liquid Chromatography Purification of Polyunsaturated Phospholipids and Characterization Using Ultraviolet Derivative Spectroscopy	136
<i>Laura L. Holte, Frederik J. G. M. van Kuijk, and Edward A. Dratz</i>	
Colorimetric Determination of <i>N</i> -Acetylhexosamine-Terminating O-Glycosidically Linked Saccharides in Mucins and Glycoproteins	142
<i>Veer P. Bhavanandan, Mostafa Sheykhnazari, and Halagowder Devaraj</i>	
Preparation and Characterization of Monoclonal Antibodies to an N-Linked Oligosaccharide	149
<i>Seizo Masutani, Nobuko Miyazawa, Shigeru Fujii, Atsushi Nishikawa, Hirokazu Matsukawa, Takashi Shimano, Takesada Mori, and Naoyuki Taniguchi</i>	
Conditions Influencing Yield and Analysis of 8-Hydroxy-2'-deoxyguanosine in Oxidatively Damaged DNA	155
<i>R. A. Floyd, M. S. West, K. L. Eneff, J. E. Schneider, P. K. Wong, D. T. Tingey, and W. E. Hogsett</i>	
Detection and Characterization of Heparin-Binding Proteins with a Gel Overlay Procedure	159
<i>Tevie Mehlman and Wilson H. Burgess</i>	
Identification of FAD, FMN, and Riboflavin in the Retina by Microextraction and High-Performance Liquid Chromatography	164
<i>David W. Batey and Curtis D. Eckhert</i>	
Improved Assays of α -Lactalbumin and Galactosyltransferase	168
<i>M. Hölpert and T. G. Cooper</i>	
A Rapid, High Resolution DNA Sequencing Gel System	176
<i>B. Franz Lang and Gertraud Burger</i>	
Analysis of Mucin-Derived Oligosaccharides by Medium-Pressure Gel-Permeation and Amino-Plate Thin-Layer Chromatography Conducted in Conjunction	181
<i>Yukinobu Goso and Kyoko Hotta</i>	
Microplate Reader-Based Kinetic Determination of α -Amylase Activity: Application to Quantitation of Secretion from Rat Parotid Acini	187
<i>Satvinder K. Soor and Maxwell T. Hincke</i>	
pOEV: A <i>Xenopus</i> Oocyte Protein Expression Vector	192
<i>Samuel L. Pfaff, Michael M. Tamkun, and William L. Taylor</i>	
Extraction Method for Preparing Pyridylamino Sugar Derivatives and Application to Porcine Gastric Mucus Glycoprotein Analysis	200
<i>Hitoo Iwase, Ikuko Ishii-Karakasa, Tsukiko Urata, Tohru Saito, and Kyoko Hotta</i>	
Isolation of Proteoglycans Using Phenol Extraction and Isopycnic Centrifugation in Cesium Trifluoroacetate	203
<i>J. A. McBain and G. C. Mueller</i>	
Affinity Chromatography of DNA Fragments and P-Modified Oligonucleotides	214
<i>V. F. Zarytova and I. G. Shishkina</i>	
Regeneration of Enzymatic Activity after Sodium Dodecyl Sulfate/Polyacrylamide Gel Electrophoresis and Zinc Acetate Staining: The Example of Inositol 1,4,5-Trisphosphate 5-Phosphatase	219
<i>Anne Delvaux, Manuela Lemos, Colette Moreau, and Christophe Erneux</i>	
A Spectrophotometric Method for Simultaneous Determination of Protein-Bound Hexoses and Fucose with a Mixture of L-Cysteine and Phenol	222
<i>V. Djurdjić and Lj. Mandić</i>	
A Modified Tetramethylbenzidine Method for Measuring Lipid Hydroperoxides	228
<i>Panakkezhum D. Thomas and Mark J. Poznansky</i>	
Assay for β -Ureidopropionase by High-Performance Liquid Chromatography	233
<i>Günther Waldmann and Beate Podschun</i>	
A Methodology for Determination of Phospholipids	237
<i>Rami Almog, Carol Anderson-Samsonoff, Donald S. Berns, and Regina Saulsbery</i>

- Volume 185, Number 2, (1990): John Lee, Yanyun Wang, and Bruce G. Gibson, "Recovery of Components of Fluorescence Spectra of Mixtures by Intensity- and Anisotropy Decay-Associated Analysis: The Bacterial Luciferase Intermediates," pp. 220-229 243

NUMBER 2, AUGUST 1, 1990

- Review. Reporter Genes: Application to the Study of Mammalian Gene Transcription
Jawed Alam and Julia L. Cook 245
- Deletion Mutagenesis in M13 by Polymerase Chain Reaction Using Universal Sequencing Primers
E. Tannich, M. Tümmeler, H. H. Arnold, and K. Lingelbach 255
- Parameterization of Contribution of Sugar Units to Elution Volumes in Reverse-Phase HPLC of 2-Pyridylaminated Oligosaccharides
Yuan C. Lee, Bryan I. Lee, Noboru Tomiya, and Noriko Takahashi 259
- Quantitation of Specific Fragments in DNA Restriction Digests: Application to the Cohesive Fragments in Lambda DNA Digests
Steven B. Zimmerman and Stefan O. Trach 267
- Lectin Affinity Chromatography of Proteins Bearing O-Linked Oligosaccharides: Application of Jacalin-Agarose
Glen L. Hortin and Beverly L. Trimpe 271
- "Glutaraldehyde-P", a Stable, Reactive Aldehyde Matrix for Affinity Chromatography
Sunanda R. Narayanan, Sunil V. Kakodkar, and Laura J. Crane 278
- Detection of Lipopolysaccharides Blotted to Polyvinylidene Difluoride Membranes
Murry A. Stein, Sylvia A. McAllister, Kenneth H. Johnston, and Dana L. Diedrich 285
- An Enzymatic Assay for Vitronectin Based on Its Selective Phosphorylation by Protein Kinase A
Beatriz Korc-Grodzicki, Daniel Chain, Tamar Kreizman, and Shmuel Shaltiel 288
- Separation of Phycobiliprotein Subunits by Reverse-Phase High-Pressure Liquid Chromatography
Ronald V. Swanson and Alexander N. Glazer 295
- Two-Step Isolation of Bacterial Ribonucleic Acid without Using a Chaotropic Agent or Cesium Chloride Centrifugation
Christina L. Chang, Bei Qian Shi, and Lawrence C. Davis 300
- Synthesis, Purification, and Characterization of 2,4,6-Trinitrophenyl-UDP-galactose: A Fluorescent Substrate for Galactosyltransferase
R. A. Cardullo, S. Agrawal, K. M. Bocian, C. A. McKinnon, and D. E. Wolf 305
- Automation of a Chloramphenicol Acetyltransferase Assay
Anne Chauchereau, Daniel Astinotti, and Marie-Madeleine Bouton 310
- Fluorescence Assay for Per-Cell Estimation of Cytochrome P-450-Dependent Monooxygenase Activities in Keratinocyte Suspensions and Cultures
John J. Reiners, Jr., Amador R. Cantu, Amy Pavone, Stephanie C. Smith, Carol R. Gardner, and Debra L. Laskin 317
- Flow Injection Analysis of Serum Urea Using Urease Covalently Immobilized on 2-Fluoro-1-methylpyridinium Salt-Activated Fractogel and Fluorescence Detection
D. Narinesingh, R. Mungal, and T. T. Ngo 325
- Comparison of Specific Radioactivities of Human α -Lactalbumin Iodinated by Three Different Methods
Eric T. Thean 330
- Nonradioactive Labeling of Probe with Digoxigenin by Polymerase Chain Reaction
Thomas Lion and Oskar A. Haas 335
- Simultaneous Isolation of DNA, RNA, and Antigenic Protein Exhibiting Kinase Activity from Small Tumor Samples Using Guanidine Isothiocyanate
Laurence M. Coombs, Dennis Pigott, Alison Proctor, Marian Eydmann, Joachim Denner, and Margaret A. Knowles 338
- Microscale, Filtration-Type Binding Assay for Studying Myosin-Erythrocyte Protein 4.1 Interactions
Richard H. Racusen and Gary R. Pasternack 344

A Procedure for Making Simultaneous Determinations of the Relative Levels of Gene Transcripts in Tissues or Cells	<i>Paul R. Kerkof and Gregory Kelly</i>	349
Assay of <i>N</i> -Myristoyl Transferase by Selective Adsorption of Myristoyl-coenzyme A on Acidic Alumina	<i>Aurel Popa Wagner and Janos Retey</i>	356
Determination of Sulfhydryl Groups and Disulfide Bonds in a Protein by Polyacrylamide Gel Electrophoresis	<i>Nobuyuki Takahashi and Masaaki Hirose</i>	359
Covalent Immobilization of Proteins and Peptides for Solid-Phase Sequencing Using Prepacked Capillary Columns	<i>Song-Ping Liang and Richard A. Laursen</i>	366
Single-Step Organic Extraction of Leukotrienes and Related Compounds and Their Simultaneous Analysis by High-Performance Liquid Chromatography	<i>J. Huwylar and J. Gut</i>	374
Quantitative Analysis of <i>N</i> -Sulfated, <i>N</i> -Acetylated, and Unsubstituted Glucosamine Amino Groups in Hepa-rin and Related Polysaccharides	<i>Johan Riesenfeld and Lennart Rodén</i>	383
Spin Labeling of Calcium-Dependent Phospholipid-Binding Proteins	<i>Francesco M. Megli, Antonino De Lisi, and Ernesto Quagliariello</i>	390
Reversed-Phase Liquid Chromatographic Separation of Juvenile Hormone and Its Metabolites, and Its Appli-cation for an <i>in Vivo</i> Juvenile Hormone Catabolism Study in <i>Manduca sexta</i>	<i>Premjit P. Halarikar and David A. Schooley</i>	394
High-Performance Liquid Chromatographic Separation of Hyaluronan and Four Proteoglycans Produced by Human Bone Cell Cultures	<i>Neal S. Fedarko, John D. Termine, and Pamela Gehron Robey</i>	398
A Radiometric Assay for HIV-1 Protease	<i>Lawrence J. Hyland, Brian D. Dayton, Michael L. Moore, A. Y. L. Shu, J. Richard Heys, and Thomas D. Meek</i>	408
High-Performance Liquid Chromatographic Method for the Evaluation of Possible Interferences in Basophil-Histamine Release Measurements	<i>Paul D. Siegel, Daniel M. Lewis, and Stephen A. Olenchock</i>	416
cDNA Library Construction from Small Amounts of Unfractionated RNA: Association of cDNA Synthesis with Polymerase Chain Reaction Amplification	<i>Christine Domec, Bertrand Garbay, Michel Fournier, and Jacques Bonnet</i>	422
A Gas Chromatographic-Mass Spectrometric Technique for Studying Simultaneous Hydrogen-Deuteron Ex-change and Para-Orthohydrogen Conversion in Hydrogenases of <i>Desulfovibrio vulgaris</i> Hildenborough	<i>Yves Berlier, Paul A. Lepinat, and Bernard Dimon</i>	427
Analysis of Inositol by High-Performance Liquid Chromatography	<i>WeiTong Wang, Jiri Safar, and David Zopf</i>	432

CORRIGENDUM

Volume 183, Number 1, (1989): Ling Chen, Robert J. Cotter, and John T. Stults, "Plasma Desorption Mapping of the Tryptic Digest of 23-kDa Recombinant Human Growth Hormone," pp. 190-194	436

NOTICE

The Subject Index for Volume 188 will appear in the December 1990 issue as part of a cumulative index for the year 1990.

ANALYTICAL BIOCHEMISTRY

Methods in the Biological Sciences

INFORMATION FOR AUTHORS

Analytical Biochemistry is an international journal that publishes original articles on methods and methodology of interest to the biological sciences and all fields that impinge on biochemical investigation. In addition to the expected techniques that apply to biochemical preparations and analysis, the following should be considered as within the scope of the journal:

- Cell biology and cell, tissue, and organ culture methods that are of general application.

- Membranes and membrane proteins. These methods form a major section of interest.

- Procedures of interest in the field of molecular genetics including those necessary for cloning, sequencing, and synthesis of nucleic acids and for mutagenesis.

- Purification of enzymes and other proteins, but only if the methods are both novel and applicable generally, i.e., the interest is in a means of purification rather than in the protein that is being purified.

- Immunological techniques both analytical and preparative, if they are of general applicability by biochemists. Immunoassays are included but only if a unique approach is introduced rather than the determination of a substance not previously assayable.

- Pharmacological and toxicological research techniques that offer a biochemical approach.

- Review articles dealing with timely topics. Although these are generally invited, unsolicited outlines or manuscripts will be considered.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in **Analytical Biochemistry** represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted in quadruplicate to:

Analytical Biochemistry

Editorial Office
Seventh Floor
1250 Sixth Avenue
San Diego, California 92101

In the case of rejected manuscripts, only one copy of the manuscript will be returned to the author.

An extended Instructions to Authors is published in the July issue during odd-numbered years. Reprints are available from the Editorial Office. Authors should consult this Information for details on nomenclature, IUPAC-IUB rules and recommendations, and accepted abbreviations.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. In order to facilitate the processing of manuscripts, the journal requests that at least four copies be submitted, each copy to include all figures (originals or glossy prints) and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about $8\frac{1}{2} \times 11$ inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 55 letters and spaces), an abstract (250 words), the address to which proof should be mailed, and the corresponding author's telephone number and fax or telex number. In creating a title for your paper, please omit words such as *novel*, *rapid*, *improved*, *simple*, *sensitive*, *efficient*, *convenient*, *new*. Each is felt to be redundant and actually slows down the reader who is scanning the article titles and wants to know more about the method itself. Please substitute informative words that will give readers a more complete idea of the usefulness of your paper with regard to the limitations of their equipment or sample type. Abbreviations should not be used in the article title or running title. Please number all pages of the manuscript. The appropriate subject category should be indicated on the title page.

Text. The suggested organization of an article is: abstract; introductory statement; Materials and Methods; Results; Discussion; Acknowledgments; References. Some of these sections may be combined if the presentation is thereby made clearer or more effective. Although this is the general form, the journal will accept variation from it but does require an abstract.

Names of chemical or organic substances should follow the recommendations of the IUPAC-IUB Joint Combined Commission on Biochemical Nomenclature (JCBN) as published in the extended Instructions for Authors, appearing in the July issue of this journal during odd-numbered years.

Authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text: each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for photoreproduction. A convenient size for drawings is $8\frac{1}{2} \times 11$ in. (21×27.5 cm). They should be planned to fit the proportion of the printed page ($7\frac{1}{8} \times 9$ in.; column width, $3\frac{1}{2}$ in.). Lettering on drawings should be of professional quality or generated by *high-resolution* computer graphics and should be large enough that in the printed version the lettering is 6–8 point. Except for single-letter part designations lettering on printed figures should not be larger than 10 points. Wide variation in type sizes is undesirable. If, after reduction, the type in the figures would be larger than the type in the text, then publication of the article may be delayed. Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Alternatively, *high-quality* computer graphics may be acceptable. Graph paper if used should be ruled in blue. Grid lines that are to show in the final reproduction should be inked in black. Properly prepared glossy prints are acceptable.

Photographs must be kept to a minimum. All photographs should be submitted as single glossy prints with strong contrasts and not mounted on cardboard; the magnification should be indicated by a scale where possible. Simple histograms should be avoided. A table or a paragraph in the text is preferred.

Illustrations in color can be accepted only if the authors defray the cost.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. Each table should have a short explanatory title.

Authors may wish to submit complex tables or sequence information as camera-ready copy. In this way, they are spared tedious proofreading and the chance of error is reduced. Tables submitted as camera-ready copy should be typed single-spaced whenever possible, and preferably submitted as 5×7 -in. glossy prints.

Footnotes should be designated in text by superscript numbers and typed on a separate sheet following the References. Footnotes to tables should be identified with lowercase italic superscript letters and placed at the bottom of the table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Whenever reference is made to an author's manuscript "in press," copies of the manuscript must be included. Abbreviations of journal titles should follow the style used in *Chemical Abstracts Service Source Index*, 1985. Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Mitchell, L. G., and Merrill, C. R. (1989) *Anal. Biochem.* **178**, 239–242.
2. Bovey, F. A., and Jelinski, L. W. (1983) Chain Structure and Conformation of Macromolecules, p. 150, Academic Press, New York.
3. Kaminsk, L. S. (1985) in Bioactivation of Foreign Compounds (Anders, M. W., Ed.), pp. 157–175, Academic Press, Orlando, FL.

Proofs. Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.
